

Document Storage for Business Central

NavXtender and DocXtender from Insight Works are free utilities that enable users to attach documents to any page in Business Central with a simple drag and drop.

The utilities from Insight Works work with any page in Business Central that supports attachments. You will easily associate customer POs to orders; invoices to POs; quality documents to receipts; or any other file to pages in Business Central.

There is no need to maintain an independent file storage system, and you can forget about having to pass around documents using email. Easily attach documents to your Business Central records making them accessible when you need them, without having to search for them, and making them available to other users.

- Save significant time by not having to search for files. Files are stored with your Business Central record so you, and others, always know where they are.
- Don't lose another document. By attaching your documents to Business Central records they are available when you need them.
- Fire and floods can't destroy your digital documents like they can paper.
- Reduce your carbon footprint by eliminating the need manage paper documents.

NavXtender

NavXtender is designed for the on-prem (Windows Role Tailored Client) version of Dynamics 365 Business Central (formerly known as NAV).

DocXtender

For those using the cloud (web browser-based) version of Dynamics 365 Business Central, you'll want to install DocXtender.
